

Bob W's History

Diagnosed at age 69. Gleason = 4+3, PSA = 10, PSA doubling time = 8 months, PIRADS = 5, Tumor size = 1.3 cm, possible extra-capsular extension (T3a).

Dutasteride reduced PSA from 10 to 2.4 over 5 months. Then, PSA increased to 4 after stopping dutasteride. Did 5 sessions of SBRT and 6 months of Orgovyx™ ADT along with simultaneous high concentration (1%) estradiol gel applied scrotally. PSA after treatment was undetectable. I use daily supplemental testosterone cream because I have hypogonadism. Current PSA is stable at 0.3.
