

Jerry's History

Estradiol has been a tremendous help for me to fight the absence of testosterone. I treated my Gleason 9, cT3a PCa with IMRT and 3 years of Lupron ADT. I experienced loss of bone density (osteopenia), debilitating fatigue, brain fog, and hot flashes. When my cancer reoccurred a few years later, I chose orchiectomy to permanently eliminate testosterone, and then elected to supplement with estradiol patches for symptomatic relief.
